

Moving Towards the Machining/Processing Market

During the financial crisis in year 2009, instead of making sales, Hartford focused on facilities inventory such as establishing factory campus, investing precision equipments and devices and developing new models... etc. And all of these made Hartford able to maximize the production and to produce higher efficiency and quality machining centers. The sales brought Hartford in the leading position out of the CNC machine tool manufacturing industry for the first half of 2010.

Hartford now is trying to promote the machine tools for machining industry to reduce 10-20% of processing time; at the same time to improve the rapid traverse of all linear way machine tools by 20-40%, all these innovations will definitely benefit users of increasing efficiency.

With those last innovated and most efficient machine tools for machining/processing market, Hartford will be showing them at the last 2010 international machinery exhibition.

Time: 3rd Nov –7th Nov 2010; Location: Taichung Shui-Nan Trading Center
